**DETAILED ACTION*****Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1, 3, 5, 6, 22, 23, 27-33 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 10/587,374. Although the conflicting claims are not identical, they are not patentably distinct from each other because of the overlap in scope. Applicants recite the claimed properties of the copending application and conclude that the adhesives are patentably distinct. This is not persuasive. The adhesive compositions of the copending claims can be the same composition as claimed herein. These compositions are not patentably distinct and the obviousness-type double patenting is proper.

Art Unit: 1796

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 3, 5, 6, 22, 23, 27-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boyce et al. US 4,284,542 in view of vanDrongelen et al US 6,103,814.

5. The rejection set forth under 35 USC 103 in the paper mailed 1/10/08 is deemed proper and is herein repeated. The newly amended claims and remarks filed in support thereof have been fully considered. Applicants have amended the claim 1 so as to contain 0.1 to 5 wt % of the ionomer. Applicants then argue that the adhesive of Boyce is based on the ionomer. This is not a patentable distinction. The effects of the compositional ingredients and the relative of amounts are understood by those having ordinary skill in the art. Further, the composition of Bouce is described as being a masterbatch, see column 2 lines 45+. A masterbatch is understood to be added to a subsequent composition so as to facilitate the incorporation of additives. As such, once the masterbatch is added to a subsequent adhesive then the relative amount of ionomer is decreases.

Art Unit: 1796

6. The vanDrongelen patent is cited as further showing adhesive compositions. These compositions are the same as those claimed but for the ionomer. IT would be prima facie obvious to use the ionomer of Boyce in the adhesive of vanDrongelen given the art recognized function of the relative ingredients. There remains no showing or allegation of unexpected results with the invention as claimed relative to the closest prior art.

### ***Conclusion***

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
